One-pager

A day in the life of a hospital security guard with a body camera

11:00 PM

A guard starts their night shift by scanning their RFID card. The VideoManager system assigns a body camera to the guard, which identifies itself in the docking station with a solid red LED. From this point on, all footage captured will be assigned to the guard.

11:02 PM

The guard connects their MOTOTRBO radio to their body camera by creating a device profile on VideoManager. By doing so they are allowing for emergency buttons to initiate recording if an incident escalates.

11:45 PM

Presence is detected in a sensitive area and a colleague alerts the guard from the control center via the guard's radio. As the guard walks over to the area in question, he turns on his body camera.

11:47 PM

Intruder engages the guard once he approaches. The intruder is attempting to access a confidential area and threatens the guard with a physical altercation. The guard radios a colleague for backup.

11:50 PM

The second guard approaches whose body camera also begins to record once he enters his colleague's vicinity. Intruder begins to de-escalate upon seeing the second security guard's camera turn on. The guards remove the intruder from the hospital and secure the area.

12:05 AM

The guard bookmarks footage and is offloaded right away, to be reviewed by an authorized user ahead of the other recordings that are stored within the VideoManager software system. Optionally, the footage can be viewed on the VMS system, alongside associated footage from fixed security cameras located in the hospital wing.

12:07 AM

Command center team reviews saved video that has been securely offloaded to VideoManager. The team decides to send the footage to management teams to use in protocol evaluation, training, and improving best practices. Footage is erased from the camera.

4:00 PM

The guard returns to normal duties and at the end of their shift, the guard returns their body camera and radio to a docking station. The body camera is now unassigned from the nurse, and its battery begins charging to prepare for the day guard's shift.
